PROFESSIONAL SUMMARY

Full-Stack Web Developer specializing in the MERN stack, real-time systems, and AI-powered web applications. Experienced in building scalable SaaS platforms, JWT-secured APIs, and Socket.IO-based real-time features. Strong problem-solving background with hands-on experience in DSA, RESTful APIs, and AI integrations using OpenAI API.

TECHNICAL SKILLS

- **Core:** Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Git, RESTful APIs, JWT Authentication, Socket.IO
- **Databases:** MongoDB, PostgreSQL, SQL, Prisma ORM
- **Frameworks & Web Technologies:** React, Express.js, Node.js, HTML, CSS, JavaScript, Vite, Tailwind CSS
- **Tools:** Git & Github
- **Languages:** C, C++, Java, JavaScript, Python

EDUCATION

Faculty of Technology and Engineering, The Maharaja Sayajirao University of Baroda (MSU)

B.Tech in Computer Science & Engineering (Final Year Undergraduate) | CGPA: 7.8

2023 – 2027

Darshan Vidhyalay, Surendranagar

Higher Secondary Certificate (GSEB) | Gujarat Percentile: 98.65 | ACPC Rank: 905

2023

Sunrise School, Rampara-Surendranagar

Secondary School Certificate (GSEB) | Gujarat Percentile: 97.26

2021

PROJECTS

NexaAI — AI-Powered Content Creation Platform | [Live Demo](#) | [GitHub](#)

- Built a full-stack AI SaaS platform (React + Node.js/Express) enabling users to generate articles, SEO-optimized blog titles, and AI-generated images with background removal, in a single unified dashboard.
- Manage error-handling and retry logic around third-party AI API calls to gracefully manage rate limits, timeouts, and malformed responses, keeping the generation pipeline reliable under failure.
- Implemented a fully responsive, reusable component architecture on the frontend; deployed and publicly accessible.

Tech Stack: React.js, Node.js, Express.js, REST APIs, JavaScript/TypeScript, OpenAI API

Farmer Marketplace — Smart Agriculture Platform | [Live Demo](#) | [GitHub](#)

- Built a full-stack agriculture marketplace (React + Node.js/Express + PostgreSQL/Prisma) with role-based dashboards for FARMER, BUYER, and ADMIN users, including crop listings with image uploads, category filters, and stock-threshold alerts.
- Handled critical edge cases in the Razorpay payment flow — failed/pending transaction states, webhook retries, and stock rollback on cancelled or failed orders — to keep payment and inventory state consistent, with a fallback free-payment path.
- Implemented a complete buyer journey (cart, wishlist, order placement, real-time order tracking via Socket.IO) and an admin analytics dashboard using Chart.js/Recharts.
- Secured the platform with JWT authentication, bcrypt hashing, and rate-limiting/Helmet; containerized the stack with Docker Compose (PostgreSQL, API, Nginx) for reproducible deployment.

Tech Stack: React 19, Vite, Node.js, Express.js, Prisma, PostgreSQL, Socket.IO, JWT, Razorpay, Docker, Tailwind CSS

Resume-Shortlist-App — AI Resume Screening System | [GitHub](#)

- Created an AI-powered resume shortlisting platform (FastAPI + React) automating resume parsing, skill extraction, and candidate-job matching.
- Integrated OpenAI and spaCy NLP pipelines into a FastAPI ML microservice to score and rank candidates by job-fit relevance, with error handling for malformed or failed AI responses to keep scoring reliable.
- Designed a scalable architecture separating the ML scoring service from the main application, enabling independent scaling of parsing workloads.

Tech Stack: FastAPI, OpenAI API, spaCy, Python, React.js
